The Joint Radio Company (JRC) has a new name...

Energy Connect

The energy sector is evolving at pace, and we are evolving with it.

UK energy networks are diversifying and digitalising on the road to decarbonisation.

Increasingly complex energy networks need more **intelligent, resilient** and **secure** operational telecoms systems to keep them operating safely and reliably – around the clock.

It means operational telecoms have never been more important to UK energy security, sustainability and independence.

Our new name reflects our unique position at the intersection of the energy and telecommunications sectors.

As the UK centre of expertise for energy-sector telecommunications, we are uniquely placed to support our members deploy the operational telecoms backbone needed for stable and resilient future energy systems.

Resilient Communications for Energy
